

It's 5pm and Olivia just realized that she has to stay late at work for a deadline tomorrow

Richard just got a message from his girlfriend Olivia that she is running late and he has to be in charge of shop and make dinner for the night.

When he gets to Modern Grocers, he pulls out the Modern Grocer App and begins his shopping by clicking on "Start Shopping"

Using the "Recipe" guide he is able to compare different recipes based on cost and time it takes to make it

The "Recipe" that Richard chose lists the ingredients out in a checklist and instructions are placed in a separate tab

By using the locate feature for items listed in the recipe to help make his experience in shop more efficient

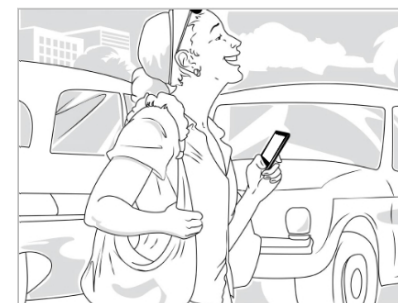

Items scanned will be placed in his basket. The total of the basket is displayed so that he can keep track of his spending

A simple press of a button will allow Richard to checkout easily and items in the basket are paid for with the presaved payment information.

The final receipt is displayed with all of the items. At the top it highlights amount of loyalty points earned.

Since Olivia and Richard share the same Modern Grocers account, she got the notification that dinner has been purchased as she leaves from the office. She is now happy to know that dinner will be ready at home.
